# Jotron Consultas with intentional agreement

Jotron Consultas has signed an intentional agreement with Saga Forest Carriers Intl AS, Nøtterøy, Norway. The parties have agreed to enter a project with the intention to develop C-Stowage, a Stowage Planning System, initially intended for 6 site offices in addition to the SFC HQ in Norway.

The system will be tailored to include 3D geometric models of Saga's 24 vessels. C-Stowage's main purpose will be to assist users in optimizing stowage of the vessels, while load conditions will continuously be cross-checked by C-Loading, Consultas' latest Loading Computer Program, to ensure that these are within the strength and stability limitations of each vessel. C-Stowage will receive booking data from Dataloy and provide vessels' stow plans to both Saga's own organization as well as to US Homeland Security according to the latest Cargo Security Requirements for Maritime Carriers.

Jotron Consultas has initially estimated a schedule of 9 months where the two companies will work closely together in the phases of documenting the Requirement Specifications, System Development and Prototype testing.

We are proud to be chosen by Saga and look forward to enter an exciting project which represents both a new client and a new product to us!
